arcsine and
arctangent

Arccosine, the inverse of $\cos(x)$

Lecture 21

MATH 0200

The
inverses of
 $\cos(x)$, $\sin(x)$
and $\tan(x)$

Definitions
of
arccosine,
arcsine and
arctangent

Let's take one more look at the graph of cosine.

The cosine function is not one-to-one on its (full) domain $(-\infty, \infty)$. However, it is one-to-one if we restrict the domain, for instance, to $[0, \pi]$ and, therefore is invertible on the interval $[0, \pi]$:

Arccosine, the inverse of $\cos(x)$

Lecture 21

MATH 0200

The
inverses of
 $\cos(x)$, $\sin(x)$
and $\tan(x)$

Definitions
of
arccosine,
arcsine and
arctangent

Let's take one more look at the graph of cosine.

The cosine function is not one-to-one on its (full) domain $(-\infty, \infty)$. However, it is one-to-one if we restrict the domain, for instance, to $[0, \pi]$ and, therefore is invertible on the interval $[0, \pi]$:

$$f(x) = \arccos(x)$$

$$\text{Domain: } [-1, 1]$$

$$\text{Range: } [0, \pi]$$

Arcsine, the inverse of $\sin(x)$

Let's take one more look at the graph of sine.

Lecture 21

MATH 0200

The
inverses of
 $\cos(x)$, $\sin(x)$
and $\tan(x)$

Definitions
of
arccosine,
arcsine and
arctangent

Arcsine, the inverse of $\sin(x)$

Let's take one more look at the graph of sine.

Arcsine, the inverse of $\sin(x)$

Let's take one more look at the graph of sine.

Similar to the cosine, the sine function is not one-to-one on its (full) domain $(-\infty, \infty)$. However, it is one-to-one if we restrict the domain, for instance, to $[-\frac{\pi}{2}, \frac{\pi}{2}]$ and, therefore is invertible on the interval $[-\frac{\pi}{2}, \frac{\pi}{2}]$:

Arcsine, the inverse of $\sin(x)$

Let's take one more look at the graph of sine.

Similar to the cosine, the sine function is not one-to-one on its (full) domain $(-\infty, \infty)$. However, it is one-to-one if we restrict the domain, for instance, to $[-\frac{\pi}{2}, \frac{\pi}{2}]$ and, therefore is invertible on the interval $[-\frac{\pi}{2}, \frac{\pi}{2}]$:

$$f(x) = \arcsin(x)$$

$$\text{Domain: } [-1, 1]$$

$$\text{Range: } [-\frac{\pi}{2}, \frac{\pi}{2}]$$

Arctangent, the inverse of $\tan(x)$

Lecture 21

MATH 0200

The
inverses of
 $\cos(x)$, $\sin(x)$
and $\tan(x)$

Definitions
of
arccosine,
arcsine and
arctangent

Definition

- The arcsine of $-1 \leq c \leq 1$, denoted $\arcsin(c)$, is the angle $-\frac{\pi}{2} \leq \alpha \leq \frac{\pi}{2}$ with $\sin(\alpha) = c$.

Definitions of arccosine, arcsine and arctangent

Lecture 21

MATH 0200

The
inverses of
 $\cos(x)$, $\sin(x)$
and $\tan(x)$

Definitions
of
arccosine,
arcsine and
arctangent

Definition

- The arcsine of $-1 \leq c \leq 1$, denoted $\arcsin(c)$, is the angle $-\frac{\pi}{2} \leq \alpha \leq \frac{\pi}{2}$ with $\sin(\alpha) = c$.
- The arccosine of $-1 \leq c \leq 1$, denoted $\arccos(c)$, is the angle $0 \leq \alpha \leq \pi$ with $\cos(\alpha) = c$.

Definitions of arccosine, arcsine and arctangent

Lecture 21

MATH 0200

The
inverses of
 $\cos(x)$, $\sin(x)$
and $\tan(x)$

Definitions
of
arccosine,
arcsine and
arctangent

Definition

- The arcsine of $-1 \leq c \leq 1$, denoted $\arcsin(c)$, is the angle $-\frac{\pi}{2} \leq \alpha \leq \frac{\pi}{2}$ with $\sin(\alpha) = c$.
- The arccosine of $-1 \leq c \leq 1$, denoted $\arccos(c)$, is the angle $0 \leq \alpha \leq \pi$ with $\cos(\alpha) = c$.
- The arctangent of c , denoted $\arctan(c)$, is the angle $-\frac{\pi}{2} < \alpha < \frac{\pi}{2}$ with $\tan(\alpha) = c$.

Definitions of arccosine, arcsine and arctangent

Lecture 21

MATH 0200

The
inverses of
 $\cos(x)$, $\sin(x)$
and $\tan(x)$

Definitions
of
arccosine,
arcsine and
arctangent

Definition

- The arcsine of $-1 \leq c \leq 1$, denoted $\arcsin(c)$, is the angle $-\frac{\pi}{2} \leq \alpha \leq \frac{\pi}{2}$ with $\sin(\alpha) = c$.
- The arccosine of $-1 \leq c \leq 1$, denoted $\arccos(c)$, is the angle $0 \leq \alpha \leq \pi$ with $\cos(\alpha) = c$.
- The arctangent of c , denoted $\arctan(c)$, is the angle $-\frac{\pi}{2} < \alpha < \frac{\pi}{2}$ with $\tan(\alpha) = c$.

Example

- $\arcsin(0.5) = \frac{\pi}{6}$ as $0 \leq \frac{\pi}{6} \leq \pi$ and $\sin\left(\frac{\pi}{6}\right) = 0.5$;

Definitions of arccosine, arcsine and arctangent

Lecture 21

MATH 0200

The
inverses of
 $\cos(x)$, $\sin(x)$
and $\tan(x)$

Definitions
of
arccosine,
arcsine and
arctangent

Definition

- The arcsine of $-1 \leq c \leq 1$, denoted $\arcsin(c)$, is the angle $-\frac{\pi}{2} \leq \alpha \leq \frac{\pi}{2}$ with $\sin(\alpha) = c$.
- The arccosine of $-1 \leq c \leq 1$, denoted $\arccos(c)$, is the angle $0 \leq \alpha \leq \pi$ with $\cos(\alpha) = c$.

Example

- $\arcsin(0.5) = \frac{\pi}{6}$ as $0 \leq \frac{\pi}{6} \leq \pi$ and $\sin\left(\frac{\pi}{6}\right) = 0.5$;
- $\arctan(\sqrt{3}) = \frac{\pi}{3}$ as $-\frac{\pi}{2} < \frac{\pi}{3} < \frac{\pi}{2}$ and $\tan\left(\frac{\pi}{3}\right) = \sqrt{3}$;

Question

Evaluate $\arctan(\tan(-5))$ (round your answer to **three** decimal places).

Example

Find the smallest **positive** number x such that $\tan(x) = -2$.

The
inverses of
 $\cos(x)$, $\sin(x)$
and $\tan(x)$

Definitions
of
arccosine,
arcsine and
arctangent

Example

Find the smallest **positive** number x such that $\tan(x) = -2$.

Example

Find the smallest **positive** number x such that $\tan(x) = -2$.

Notice that $\arctan(-2)$ is a negative number, minus the length of the arc CB , shaded in blue. The smallest positive value of x with $\tan(x) = -2$ is the length of the arc CA , shaded in green. It is equal to $\pi + \arctan(-2)$.

Example

Consider an isosceles triangle $\triangle ABC$ with $|AB| = |BC| = 10$ and $|AC| = 12$. Find measure of the angle $\angle BAC$.

Example

Consider an isosceles triangle $\triangle ABC$ with $|AB| = |BC| = 10$ and $|AC| = 12$. Find measure of the angle $\angle BAC$.

Example

Consider an isosceles triangle $\triangle ABC$ with $|AB| = |BC| = 10$ and $|AC| = 12$. Find measure of the angle $\angle BAC$.

We drop a perpendicular from vertex B to the base AC and denote the point of intersection by D . Recall that since triangle $\triangle ABC$ is isosceles, D is the midpoint of AC , so $|AD| = |DC| = 12/2 = 6$. We get $\cos(\angle BAC) = \frac{6}{10} = 0.6$, hence, $\angle BAC = \arccos(0.6) \approx 53.13^\circ$.
